1. Datasheet

Solution data	
Name	Metis Enterprise Task Management
Result type	Tool
Description/functionality	The Task Management Application supports Task Management and collaborative situations within cross-organisational businesses. The application is built as a component in the Troux Information Portal and the Metis Enterprise repository, which are commercial products. More precisely, it is built as a Model-configured User-composable Platform Service (MUPS). MUPSs are services that make use of enterprise models to generate business-oriented and context-aware graphical user interfaces to roles defined within an enterprise.
Benefits to interoperability	Support design and execution of user-centric cross-organisational business processes.
Supported models/methodologies	-
Supported input interfaces	-
Supported output interfaces	-
Validation/demonstration	EADS: Change management process.
Standards compliance	
Availability	-
License	-
Status	-
